# Non-fiction Books, SCCG & CESC

# *On Model of a Human Being*

- *Problem – Application Program - Solution*

**GUI**

**HVS**

# *Graphics & Visual Computing*

## *ACM Computing Curriculum*

*at <http://www.computer.org/education/cc2001/final/gv.htm>:*

*The area encompassed by Graphics and Visual Computing (GV) is divided into four interrelated fields:*

*Computer graphics.*

*Visualization.*

*Virtual reality.*

*Computer vision.*

# Computer Graphics

**Computer graphics is the art and science of communicating information using images that are generated and presented through computation. This requires:**

- (a) the design and construction of models that represent information in ways that support the creation and viewing of images,**
- (b) the design of devices and techniques through which the person may interact with the model or the view,**
- (c) the creation of techniques for rendering the model, and**
- (d) the design of ways the images may be preserved. The goal of computer graphics is to engage the person's visual centers alongside other cognitive centers in understanding.**

# Visualization

**Visualization.** The field of visualization seeks to determine and present underlying correlated structures and relationships in both scientific (computational and medical sciences) and more abstract datasets.

The prime objective of the presentation should be to communicate the information in a dataset so as to enhance understanding.

Although current techniques of visualization exploit visual abilities of humans, other sensory modalities, including sound and haptics (touch), are also being considered to aid the discovery process of information.

[SIGGRAPH movie](#)

# *Virtual reality*

***Virtual reality. Virtual reality (VR) enables users to experience a three-dimensional environment generated using computer graphics, and perhaps other sensory modalities, to provide an environment for enhanced interaction between a human user and a computer-created world.***

# *Computer vision*

***Computer vision. The goal of computer vision (CV) is to deduce the properties and structure of the three-dimensional world from one or more two-dimensional images. The understanding and practice of computer vision depends upon core concepts in computing, but also relates strongly to the disciplines of physics, mathematics, and psychology.***

# Compare Reality - Synthesis

Photograph

Rendering using the deterministic method

□ 2001 - **Final Fantasy** ( *The Spirits Within* )

- all characters animated, photorealism, hair for millions dollars

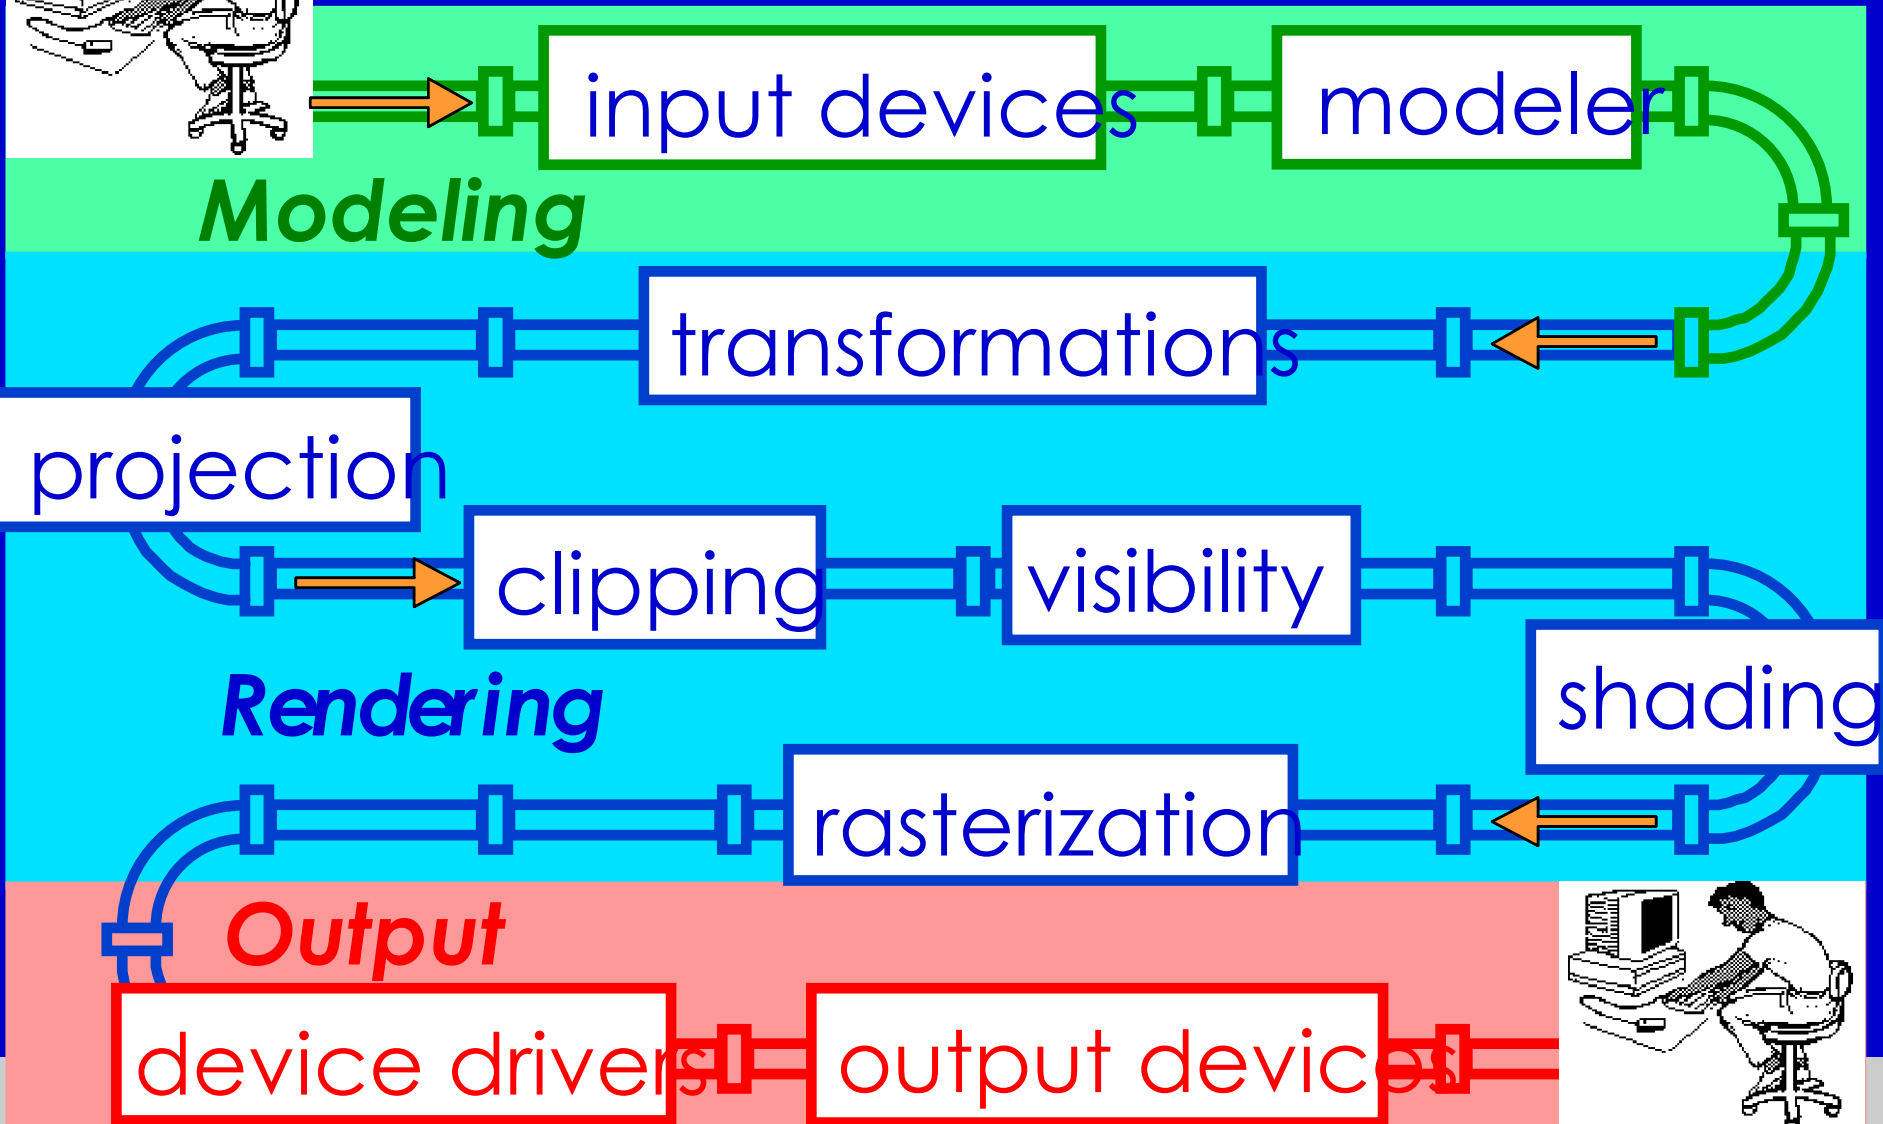

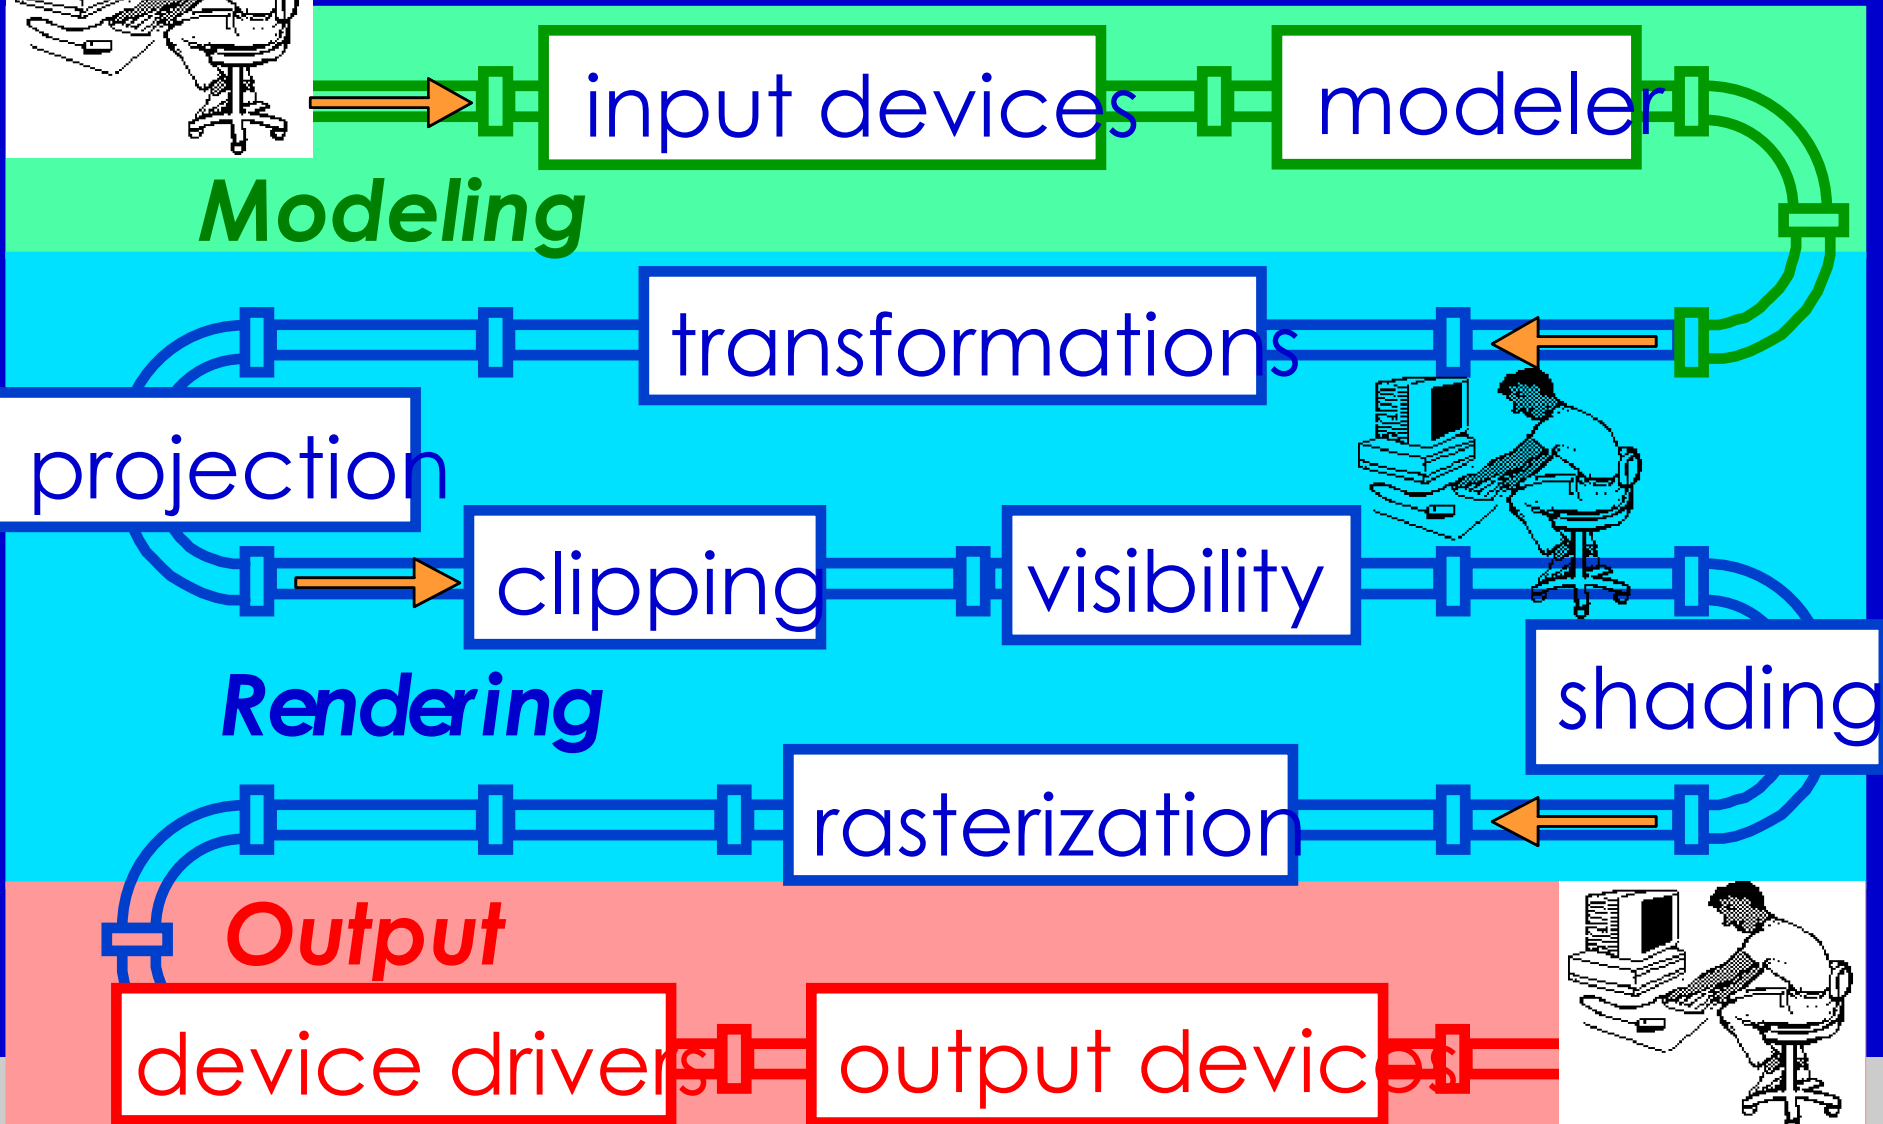

# The Graphics Pipeline Steps

# The Three Brains/Heads

Application Programmer

# Triple Schizophreny

User, bonnie,  
ISO: operator,  
customer, boss...

# *Computer Science Context*

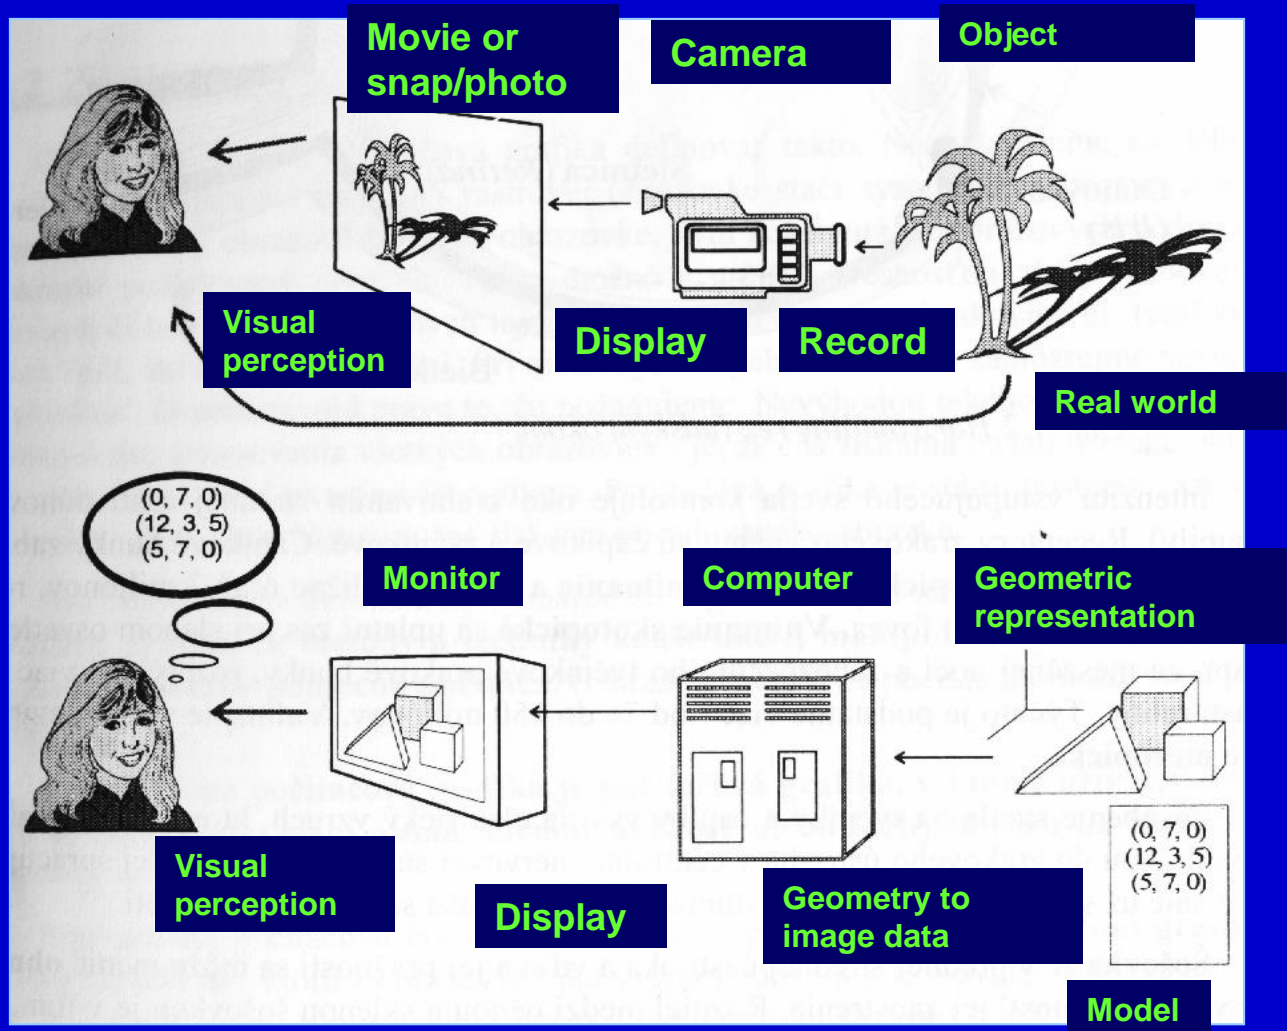

## *Reference Models:*

- Simple*
- ISO (GKS, PHIGS, PREMO, ...)*
- Others... (OpenGL, DirectX...)*

## *Analogies:*

- Photography*

# Analogy: photography & computer graphics

□ **ISO: Computer graphics:** methods & techniques for construction, manipulation, storage and displaying pictures using computer.

**ESCHER**

M.C. Escher, The Tower of Babel, 1890

# *KUBOID by P. Eliáš*

□  $\exists?$

# *KUBOID by P. Eliáš*
