# Ako čítať články?

How to Read a Paper - Srinivasan Keshav

<http://ccr.sigcomm.org/online/files/p83-keshavA.pdf>

3 passes,

**1 pass (5-10 min)**

- Carefully read the title, abstract, and introduction
- Read the section and sub-section headings, but ignore everything else
- Read the conclusions
- Glance over the references, mentally ticking off the ones you've already read

# Ako čítať články?

- **Category:** What type of paper is this? A measurement paper? An analysis of an existing system? A description of a research prototype?
- **Context:** Which other papers is it related to? Which theoretical bases were used to analyze the problem?
- **Correctness:** Do the assumptions appear to be valid?
- **Contributions:** What are the paper's main contributions?
- **Clarity:** Is the paper well written?

The first pass is adequate for papers that aren't in your research area, but may someday prove relevant.

# Ako čítať články?

## 2 pass (up to hour)

- Mark the keypoints, Make notes
- Look carefully at the figures, diagrams and other illustrations in the paper. Pay special attention to graphs.  
rushed, shoddy work from the truly excellent.
- Remember to mark relevant unread references for further reading (this is a good way to learn more about the background of the paper).

This level of detail is appropriate for a paper in which you are interested, but does not lie in your research speciality.

# Ako čítať články?

## 3 pass (1-5 hours)

- virtually re-implement the paper: make the same assumptions as the authors and re-create their work.
- You should identify and challenge every assumption in every statement

# Ako čítať články?

## How to survey literature

- First, use an academic search engine such as Google Scholar or CiteSeer and some well-chosen keywords to find three to five recent papers in the area
- do one pass on each paper to get a sense of the work, then read their related work sections
- if you are lucky, there will be a pointer to a recent survey paper
- find shared citations and repeated author names in the bibliography. These are the key papers and researchers. download these papers set them aside
- Find researchers, their recent work, top conferences
- Find key articles in recent top conference, download.
- Read 1,2,3

# Abstrakt

**Abstract.** Work on photometric stereo has shown how to recover the shape and reflectance properties of an object using multiple images taken with a fixed viewpoint and variable lighting conditions. This work has primarily relied on known lighting conditions or the presence of a single point source of light in each image. In this paper we show how to perform photometric stereo assuming that all lights in a scene are distant from the object but otherwise unconstrained. Lighting in each image may be an unknown and may include arbitrary combination of diffuse, point and extended sources. Our work is based on recent results showing that for Lambertian objects, general lighting conditions can be represented using low order spherical harmonics. Using this representation we can recover shape by performing a simple optimization in a low-dimensional space. We also analyze the shape ambiguities that arise in such a representation. We demonstrate our method by reconstructing the shape of objects from images obtained under a variety of lightings. We further compare the reconstructed shapes against shapes obtained with a laser scanner.

**Keywords:** photometric stereo, Lambertian reflectance, Lorentz transformation, diffuse lighting
