

Obrázky v MATLAB-e GUI

Cvičenia z Počítačového Videnia I.

True Color vs. Indexed Images

- True color:
 - obrázok veľkosti MxN je uchovaný v 3-rozmernom poli
 - $M \times N \times 3$ (RGB hodnoty)

Indexed image

- obrázok $M \times N$ je uchovaný v matici $M \times N$
- Farby v matici $C \times 3$

```
load clown  
image(X)  
colormap(map)
```

2	21	40				
14	17	21	21	53	53	
5	8	5	8	10	30	15
1	15	18	31	31	18	16
1	18	31	31	31		

Indexed Image Matrix

1			
...			
17	0.5178	0.1608	0.0627
21	0.1608	0.3529	0.0627
	0.6471	0.1294	0.0627
	0.1922	0.2902	0.4510

128
Colormap

Colormap

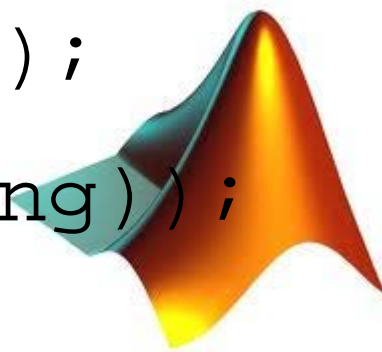

- hodnoty v intervale [0,1]
- `colormap(map);`
- `colormap(hsv(128));`

```
load clown
```

```
figure; imshow(X, colormap(map));
```

```
figure; imshow(X, colormap(jet));
```

```
figure; imshow(X, colormap(spring));
```

Konverzie

```
im = imread( 'nazov.jpg' );  
image(im);  
% nastav C<=65536  
C=16;  
[X,map] = rgb2ind(im, C);  
load clown  
imshow(X, colormap(map));  
RGB = ind2rgb(X,map);
```

Zobrazovanie obrázkov

`image(M) ;`

- priamo v matlabe
- farby zobrazovaného obrazu vôbec nemusia zodpovedať reálnym farbám

`imshow(M) ;`

- IPT
 - predpokladá, že zobrazované hodnoty sú intenzity pixlov
- `figure ;`

Zobrazovanie obrázkov - rozdiel

```
img = imread('cameraman.tif');  
figure;  
image(img);  
set(gcf, 'colormap', gray);  
figure;  
subplot(1,2,1);  
image(img); %axis off; axis image;  
subplot(1,2,2);  
imshow(img);
```

- MATLAB podporuje formáty
 - BMP, JPG, PNG, TIFF, GIF
 - JPEG 2000 formáty: JP2, JPX...
 - Iné: PNM, PCX, ICO, PBM, HDF...

M-files

- MATLAB skript
- postupnosť príkazov

- MATLAB funkcia
- meno súboru = názov funkcie
- `prvy.m`

M-files

```
function x = prvy (v)
```

```
x = v(1);
```

- Volanie:

```
y = [2 4 6 7 5 9];
```

```
x = prvy(y);
```

M-files

- `function [x,y,z] = prvy(v)`
- `prvy(v);`
- uloží do ans len x
- `function [] = prvy(v)`
- `% komentare`
- `%% spúšťateľná časť kódu`

GUI

```
>> guide
```

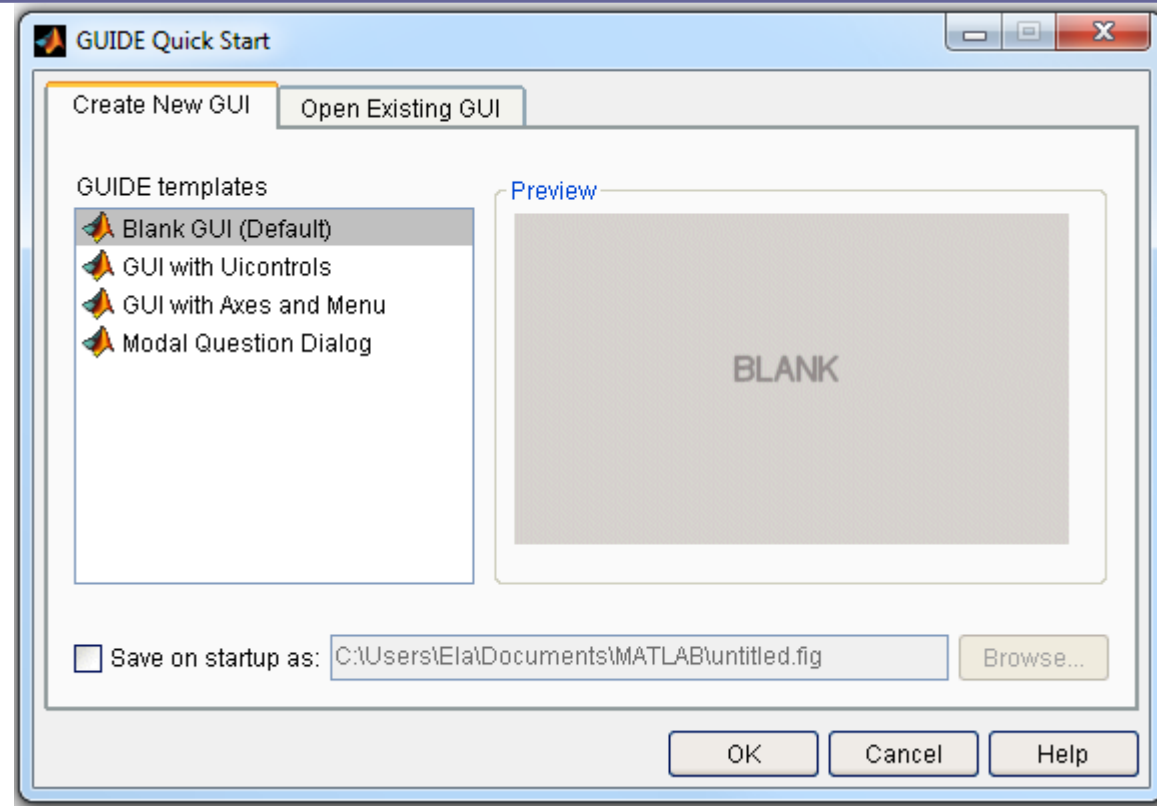

- Blank GUI

- Vytvorí dva súbory:

- meno.fig

- meno.m

- **nemeniť** meno už vytvoreného GUI

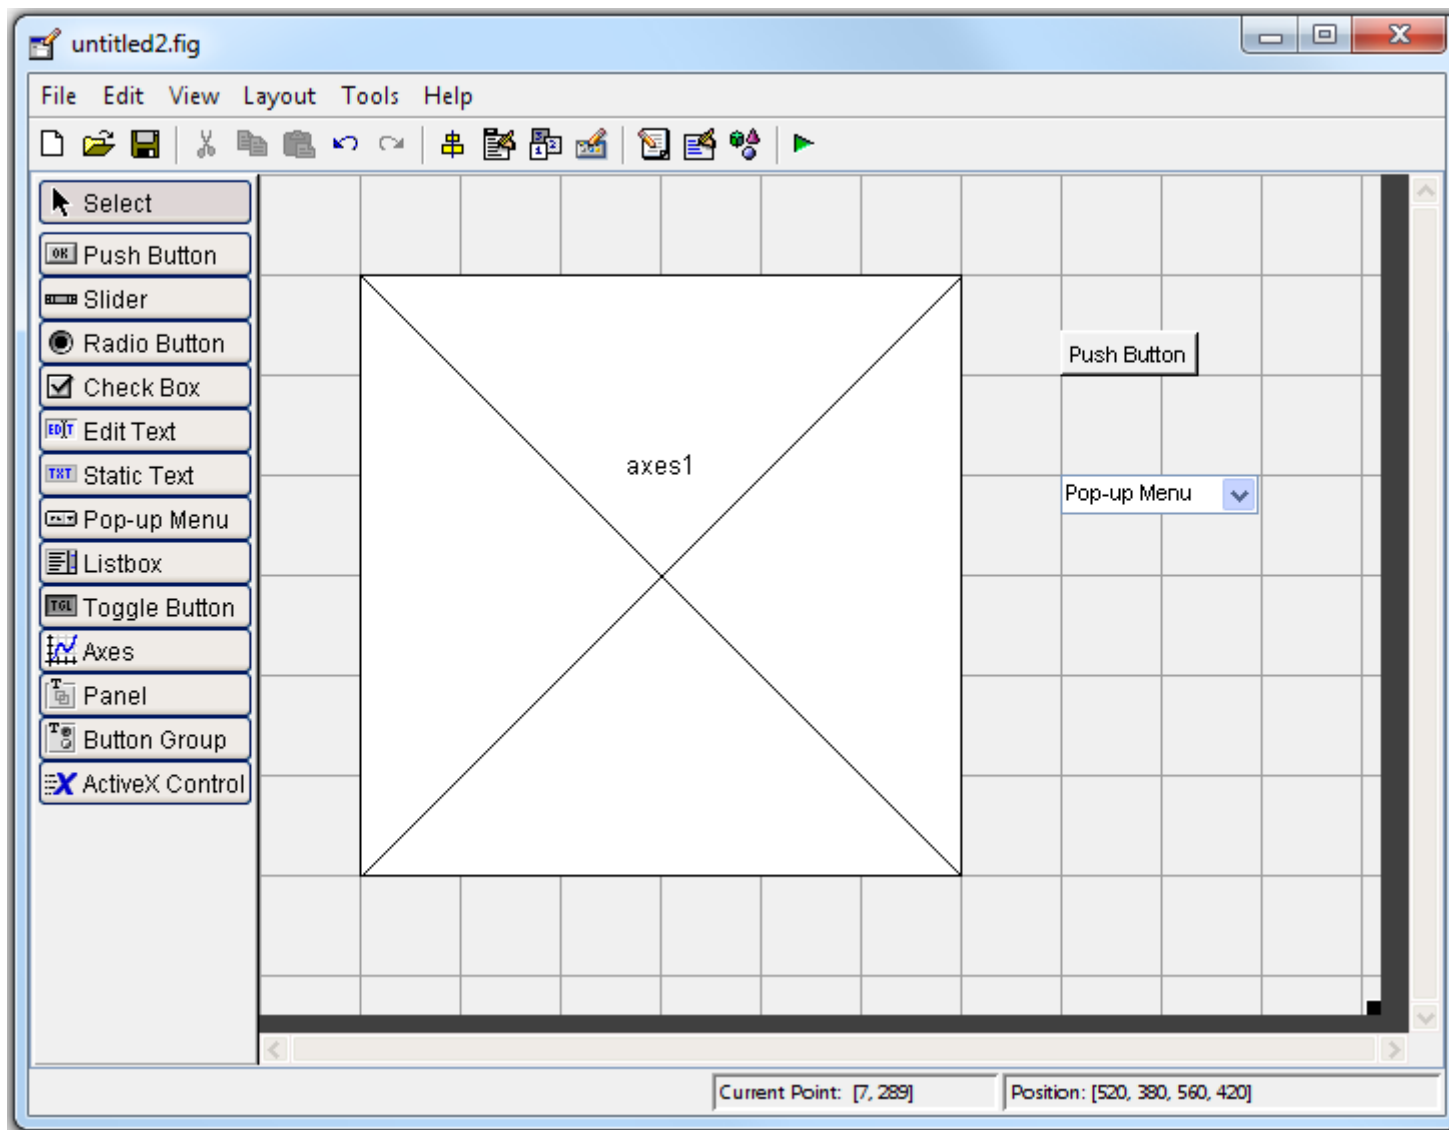

GUI

- GUI objekty:
 - Button, radio button, check box, slider
 - Edit text, Static text
 - Axes
 - Pop-up menu
 - List box
 - Panel
 - Button group...

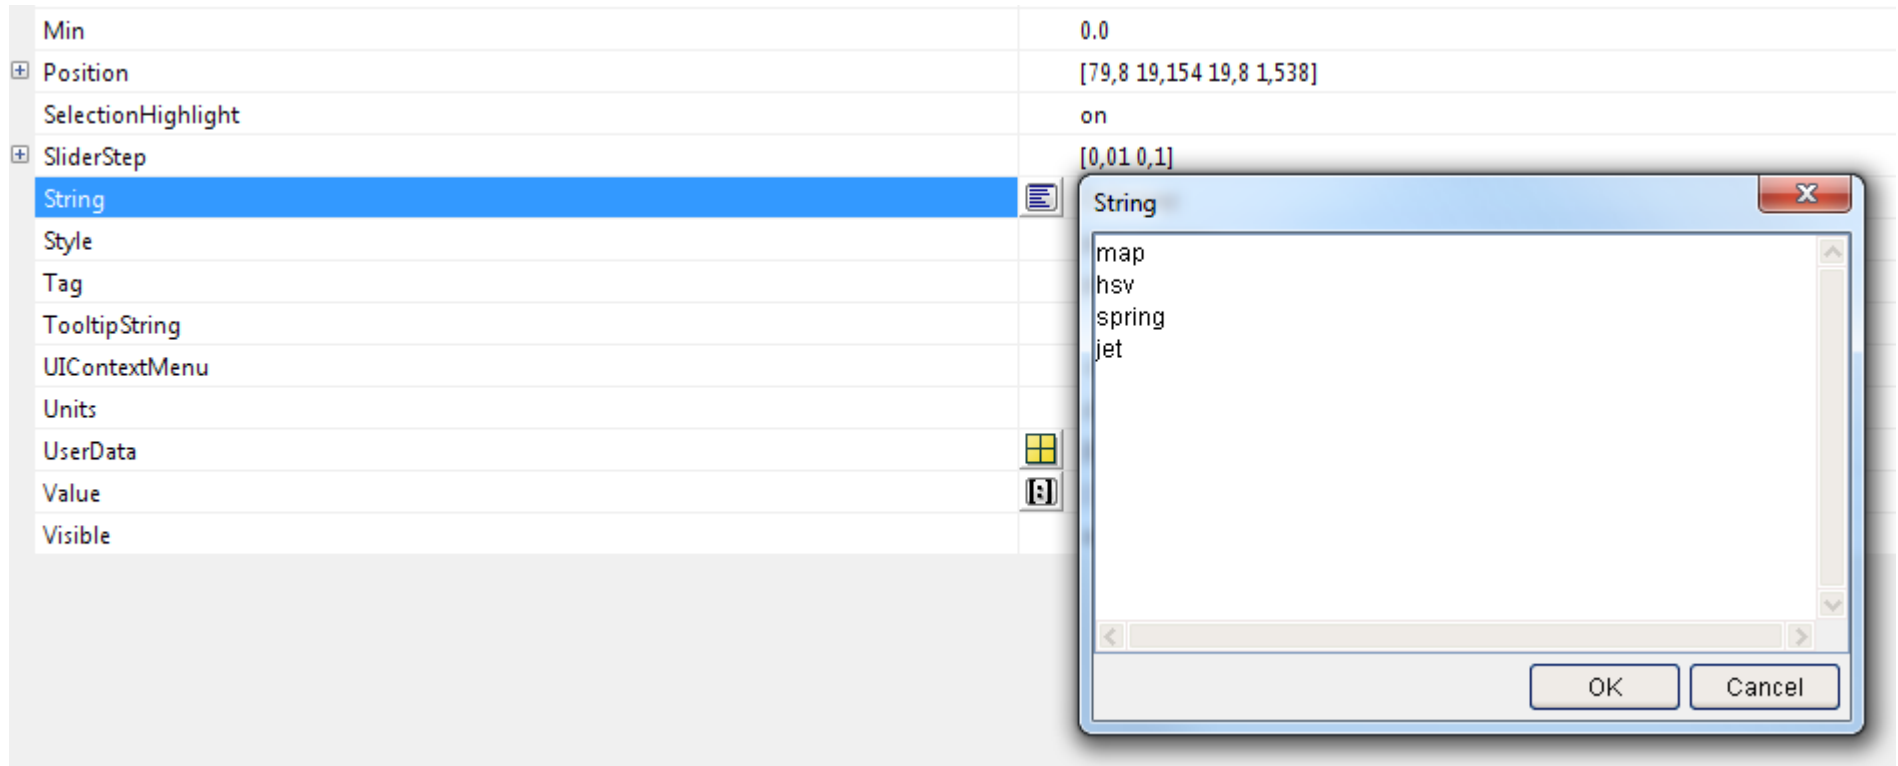

GUI

- Načítat'
- Vykreslit'
- Zmenit' farby

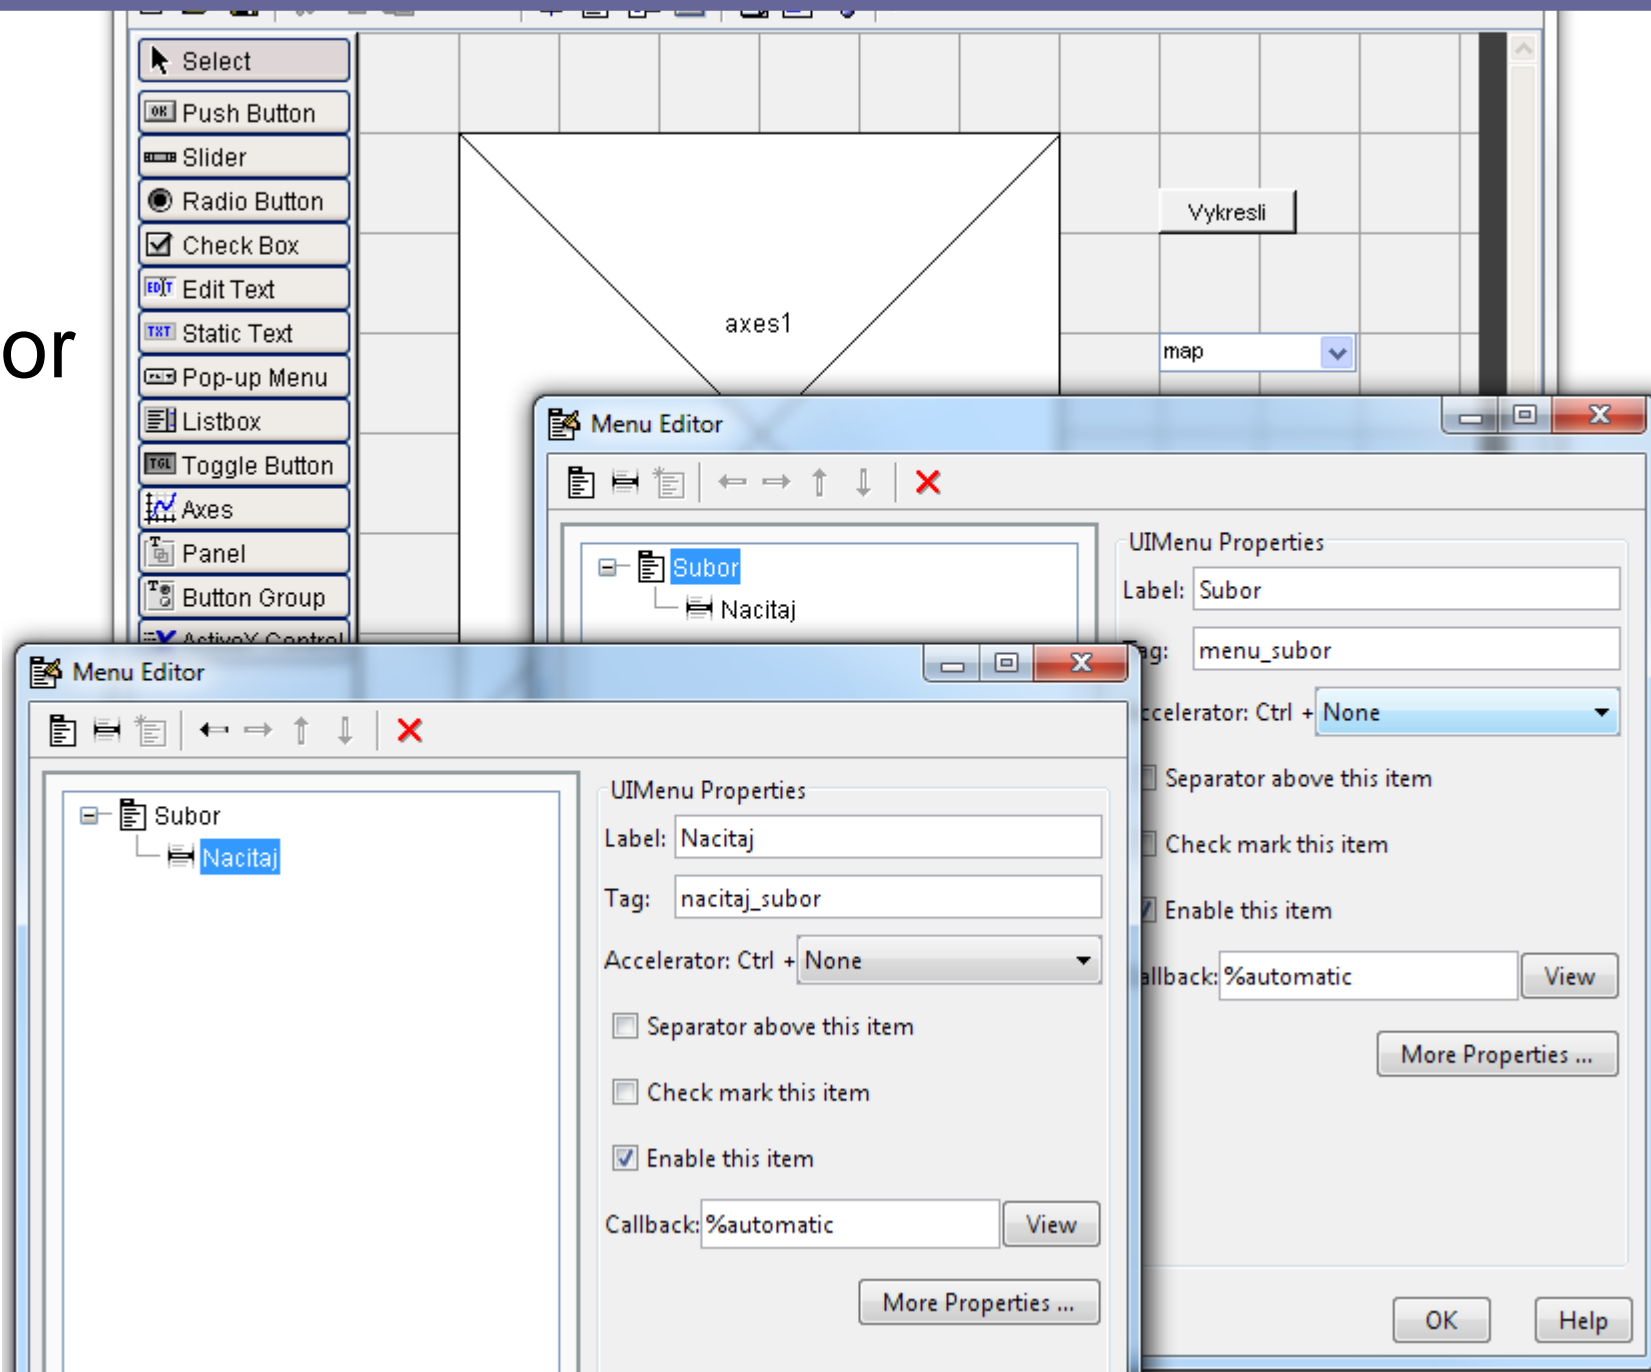

GUI

- Property Inspector
 - Color, text, name, position, opacity

GUI

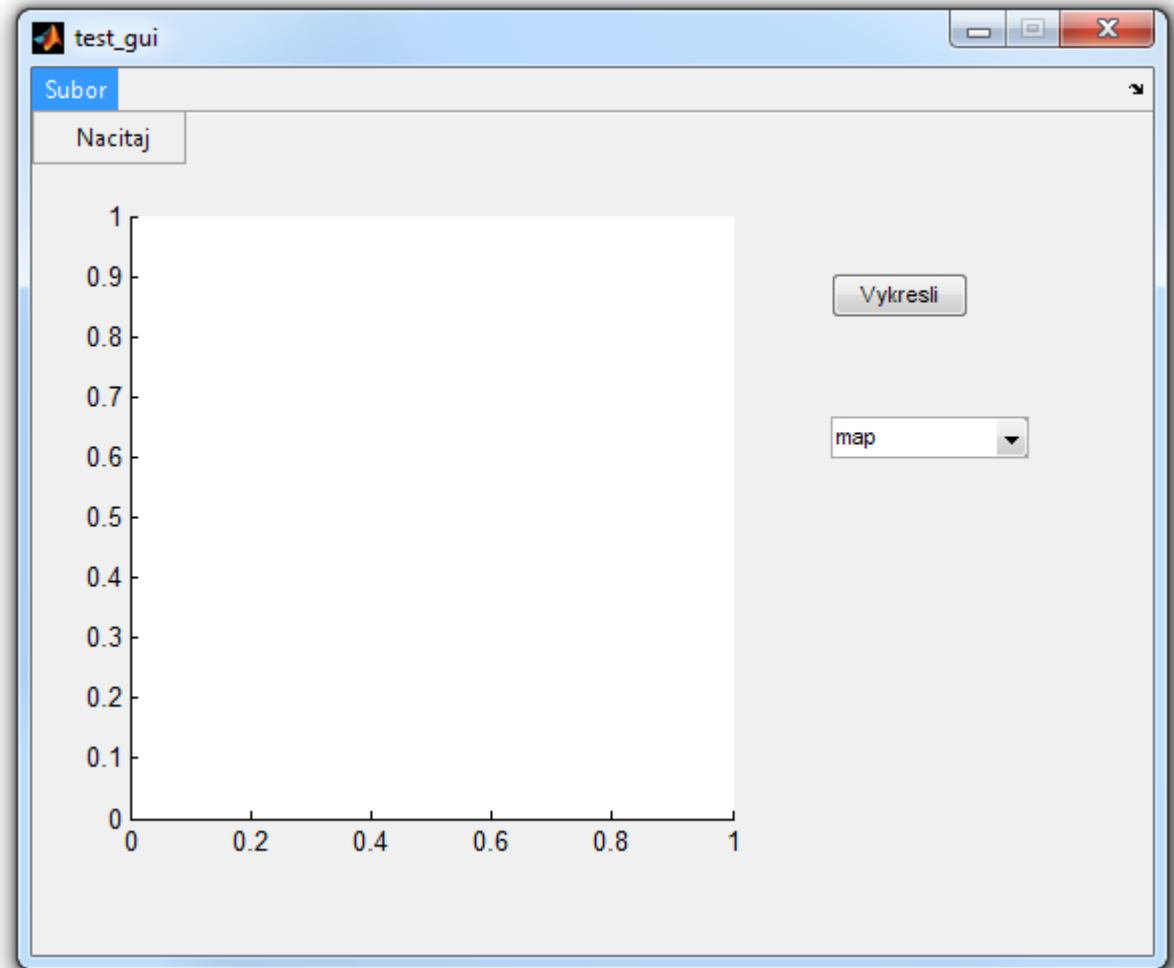

- Tools
- Menu Editor

GUI

- Save as
- Spusti
- Nic sa nedeje!
- Treba dopísat' kód

```
>> test_gui  
>>
```

GUI

- Callbacks = funkcie, ktoré sa vykonajú po aktivácii objektu
- ak chceme využívať v jednom callbacku premennú ktorú sme vytvorili v inom, musíme použiť funkcie get a set

GUI - Callbacks

- Callback
- ButtonDownFcn
- KeyPressFcn
- CreateFcn
- ...

GUI

- **Handles = štruktúra uchovávajúca data**

```
set(handles.text2, 'Visible', 'on');
```

```
g = get(handles.radiobutton1, 'Value');
```

```
set(object, 'property', value)
```

```
get(object, 'property')
```

- **Globálne data:**

```
handles.moje_data = hodnota;
```

```
guidata(hObject, handles)
```

GUI

- Objekty majú okrem štandardných parametrov tzv. 'UserData',
 - môžeme vložiť ľubovoľné dáta (obrázok, číslo)
- V jednom callbacku načítame
 - `RGB = imread('1.jpg');`
 - `set(handles.pushbutton1, 'UserData', RGB);`
- V druhom callbacku zavoláme
 - `I=get(handles.pushbutton1, 'UserData');`
 - `imshow(I);`

GUI

- Načítanie obrázka

```
[FileName, PathName]=uigetfile('*.jpg',  
'Vyber .jpg');
```

```
I = imread(fullfile(PathName,  
FileName));
```

```
figure; imshow(I);
```

GUI

```
function test_gui_OpeningFcn(hObject, eventdata, handles, varargin)  
% This function has no output args, see OutputFcn.  
% hObject      handle to figure  
% eventdata    reserved - to be defined in a future version of MATLAB  
% handles      structure with handles and user data (see GUIDATA)  
% varargin     command line arguments to test_gui (see VARARGIN)  
  
% Create color maps  
handles.map=colormap(jet);  
handles.hsv=colormap(hsv(128));  
handles.spring=colormap(spring);  
handles.jet=colormap(jet);  
% Set the current map value  
handles.current_map = handles.map;
```

GUI

```
function nacistaj_subor_Callback(hObject, eventdata, handles)  
% hObject      handle to nacistaj_subor (see GCBO)  
% eventdata   reserved - to be defined in a future version of MATLAB  
% handles     structure with handles and user data (see GUIDATA)  
  
[i_file,i_PathName] = uigetfile({'*.jpg', 'JPEG imagefile  
(* .jpg)'; '*.*', 'All Files (*.*)'}, 'Select the JPEG  
Image',[cd '\']);  
if ~isequal(i_file, 0)  
    % Reading the Image file  
    i_file = fullfile(i_PathName,i_file);  
    i_RGB = double(imread(i_file))/255;
```

GUI

```
[idx_im,handles.map] = rgb2ind(i_RGB, 256);  
handles.index_image=idx_im;  
handles.current_map = handles.map;  
end  
  
% Reset PopUp menu to 1st color map  
set(handles.popupmenu1, 'Value', 1)  
  
% Save the handles structure.  
guidata(hObject,handles)
```

GUI

```
function popupmenu1_Callback(hObject, eventdata, handles)
```

```
% hObject    handle to popupmenu1 (see GCBO)
```

```
% eventdata  reserved - to be defined in a future version of MATLAB
```

```
% handles    structure with handles and user data (see GUIDATA)
```

```
% Hints: contents = get(hObject,'String') returns popupmenu1 contents as cell array
```

```
%           contents{get(hObject,'Value')} returns selected item from popupmenu1
```

```
% Determine the selected color map
```

```
str = get(hObject,'String');
```

```
val = get(hObject,'Value');
```

GUI

```
% Set current data to the selected data set.
switch str{val};
case 'map'
    handles.current_map = handles.map;
case 'hsv'
    handles.current_map = handles.hsv;
case 'spring'
    handles.current_map = handles.spring;
case 'jet'
    handles.current_map = handles.jet;
end
colormap(handles.current_map)
% Save the handles structure.
guidata(hObject,handles)
```

GUI

```
function pushbutton1_Callback(hObject, eventdata, handles)
```

```
% hObject    handle to pushbutton1 (see GCBO)
```

```
% eventdata reserved - to be defined in a future version of MATLAB
```

```
% handles    structure with handles and user data (see GUIDATA)
```

```
imshow(handles.index_image)
```

```
colormap(handles.current_map)
```
