

INTERACTION AND GUI

WHY INTERACTION?

PASSIVE INFORMATION DISPLAY

Few
functions

Presentation
purposes mostly

WHY INTERACTION?

ACTIVE INFORMATION DISPLAY

Queries on the data

Changing visualization parameters

- Filtering
- Mapping
- Rendering

INTERACTIVE DISPLAY IMMERSES THE VIEWER

MENTAL MODEL OF THE DATA

BUILDING A MENTAL MODEL

INTERACTION WITH A 3D SCATTERPLOT

FAST RESPONSE = DIRECT MANIPULATION

DIRECT MANIPULATION

QUICK RESPONSE = CAUSALITY LINK

SPEED ISSUES

What is "real-time" ?

25 - 100 fps

5 - 30 fps

SLOW DISPLAYS

CHANGE BLINDNESS

Smooth changes too slow
Jumps and jerks

HOW TO FIX IT?

Less data
Level of detail techniques
Progressive rendering
Faster technologies (GPU, GPGPU,...)

INTERACTION AND ANIMATION

EVEN FAST DISPLAYS CAN
OBSTRUCT BUILDING A
MENTAL MODEL

EXAMPLE:

Animated Exploration
of Graphs with Radial
Layout
(Yee et al., Infovis'01)

POINTS OF INTERACTION

DIFFERENT STAGES OF INTERACTION

FILTERING

Picking, brushing, interval queries,...

MAPPING

Axes manipulation, transfer function

RENDERING

View manipulation (rotate, zoom, pan)

FILTERING: SELECT WHAT IS INTERESTING

STATE N :

What's selected and what not?

INTERACTION:

Which items are indicated

STATE $N+1$:

What should be the result?

TOTAL: $2^4 = 16$ OPERATORS

Not all are useful

BASIC SELECTION OPERATORS

Graham J. Wills:

Selection: 524,288 Ways to Say "This is Interesting"

EXAMPLE SCENARIO

1. SELECT ALL MEN OUT OF ALL PEOPLE
REPLACE operator, Attribute: sex
 2. DESELECT MEN WHERE AGE > 70
NOT operator, Attribute: age
 3. SELECT ONLY THOSE WITH INCOME < 1000
AND operator, Attribute: income
 4. ADD ALL WOMEN OUT OF ALL PEOPLE
OR operator, Attribute: sex
-

BRUSHING

WITH MEMORY / WITHOUT MEMORY

BRUSHES / LASSOS

DATA DEPENDENT / INDEPENDENT

SO IN TOTAL

16 POSSIBLE OPERATORS

65.536 POSSIBLE SETS OF OPERATORS (2^{16})

WITH / WITHOUT MEMORY = $\times 2$

BRUSH / LASSO = $\times 2$

DATA DEPENDENT/INDEPENDENT = $\times 2$

$65.536 \times 2 \times 2 \times 2 =$

524.288 WAYS TO SAY "THIS IS INTERESTING"

DEGREE OF INTEREST FUNCTION

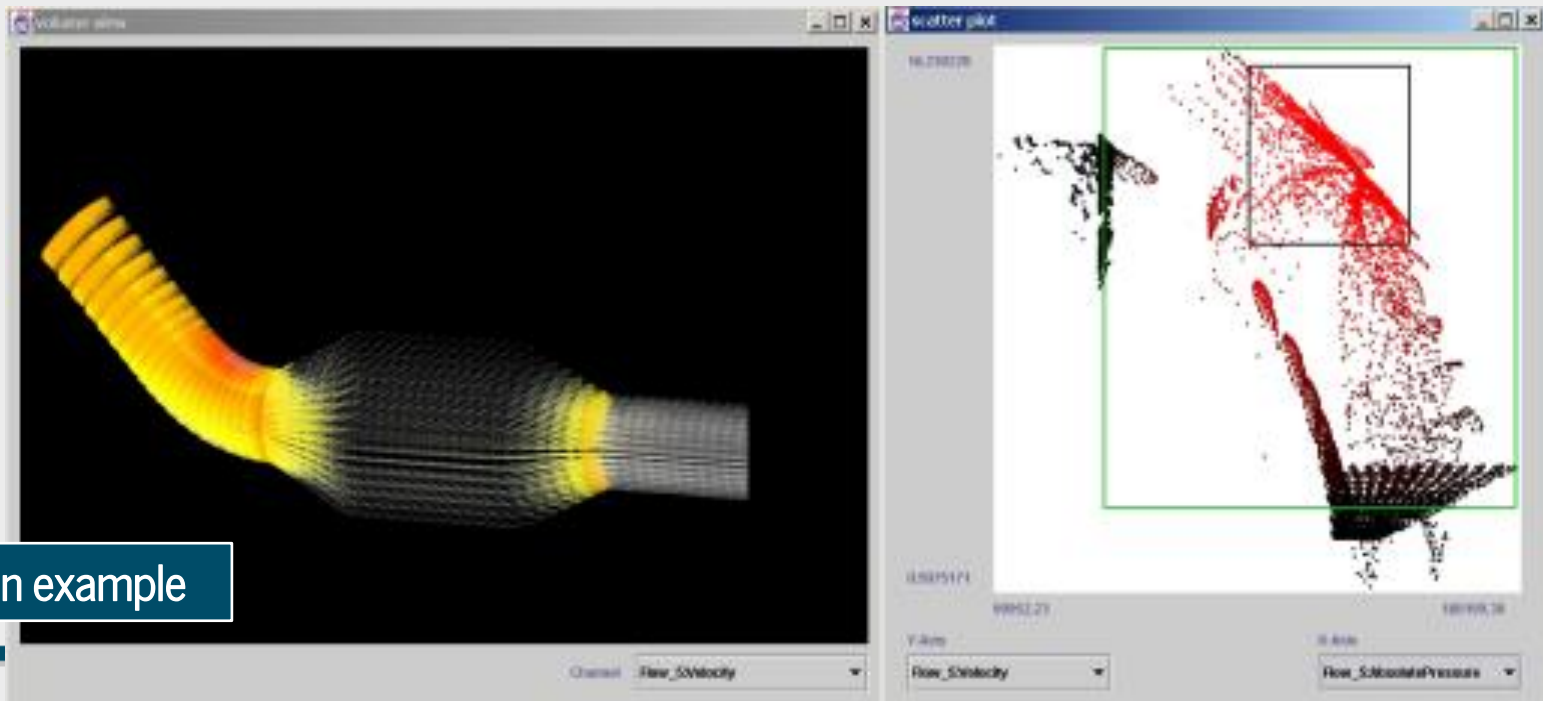

RESULT OF SELECTION, BRUSHING, QUERIES...

DISCRETE SELECTION

Data index $\rightarrow \{0,1\}$

SMOOTH SELECTION

Data index $\rightarrow \langle 0,1 \rangle$

Smooth selection example

MAPPING: AXES MANIPULATION

MAPPING FUNCTION (TRANSFER FUNCTION)

- Attribute C, Axis A
- $\langle C_{\min}, C_{\max} \rangle \rightarrow \langle A_{\min}, A_{\max} \rangle$
- Linear, logarithmic, hyperbolic, exponential...

COLOR MAPPING

SIMILAR TO ZOOMING, PANNING

VIEW MANIPULATION

ROTATE, PAN

ZOOM

Linear

Non-linear (fisheye)

OTHER DISPLAY PARAMETERS

Transparency, linking

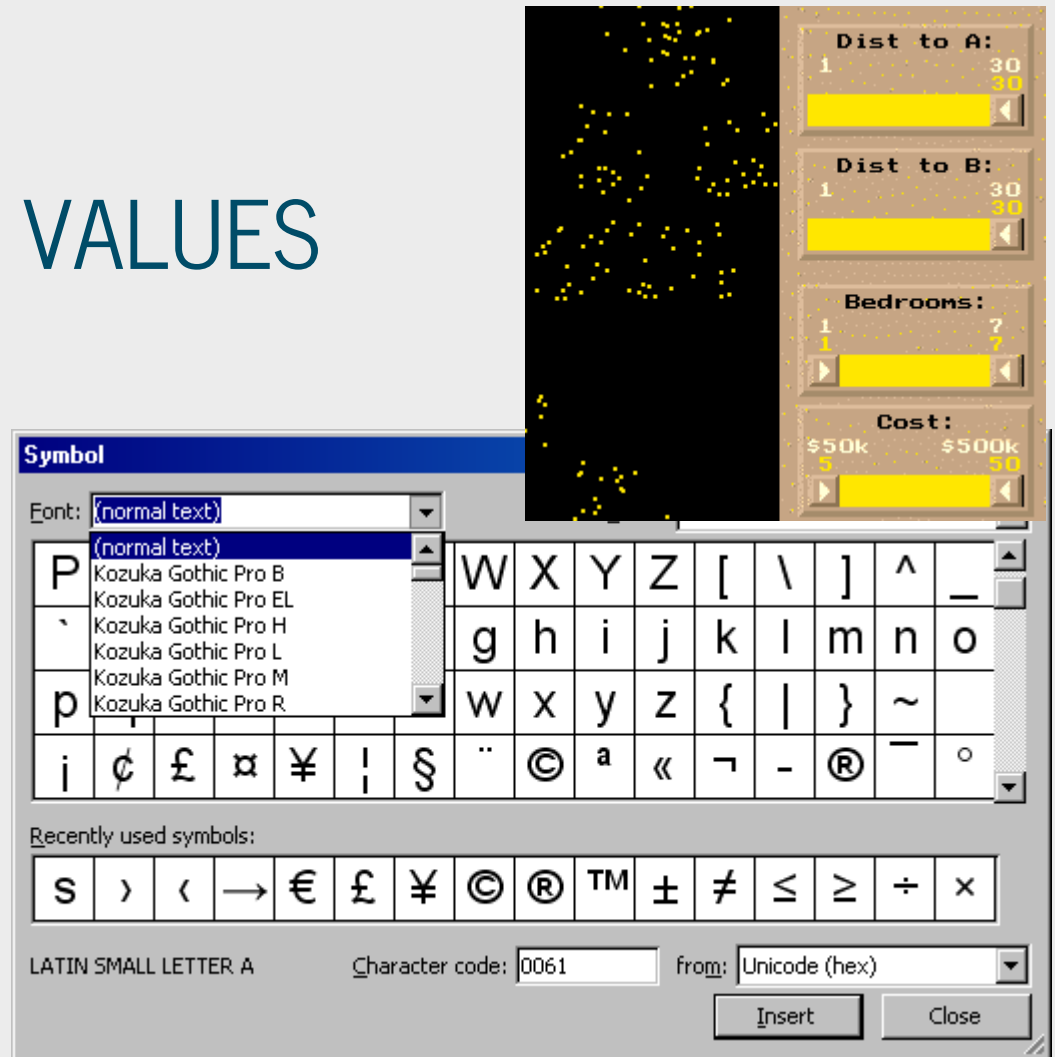

MEANS OF INTERACTION

SELECTORS

BRUSH
PICK
STRINGS, NUMERIC VALUES
INTERVALS

REMEMBER DATA
TYPES

Continuous
Discrete
Categorical ...

INTERACTION WIDGETS

INTERNAL WIDGETS

3d icons

Handles, ...

EXTERNAL WIDGETS

Sliders

Spin-buttons, ...

SIMPLE / COMBINED

RULES FOR USING WIDGETS

AFFORDANCES LABELS

- On demand
- Always visible

MIND THE TYPE OF DATA VALUES

- Discrete values - picking

- Nominal values - input boxes with completion

- Continuous - sliders

- Color values - combined widgets, HSV not RGB

INPUT DEVICES FOR HCI

KEYBOARD

MOUSE

(MULTI-)TOUCH-SENSITIVE DISPLAY

TANGIBLE INTERFACES

CAMERA

MOTION SENSORS (OPTICAL, PHYSICAL)

INTERACTION METAPHORS

METAPHORS

BEHAVIOR THAT'S BEEN EXPERIENCED BEFORE

ANALOGY TO REAL WORLD MANIPULATION

DESKTOP / ROOM (OS)

HANDLES (DTP, GRAPHICS)

HOUSES (SGI FILE SYSTEM NAVIGATOR)

GESTURES (MOUSE GESTURES)

MAGNIFYING GLASS (MAGIC LENS)

A METAPHOR GONE TOO FAR

MICROSOFT BOB

NATURAL USER INTERFACES

METAPHORS BECOME REAL
TANGIBLE UI
MOTION/KINETIC SENSORS
HAPTIC
FORCE FEEDBACK

NATURAL USER INTERFACES

SUMMARY

DIFFERENT STAGES OF VISUALIZATION

CORRECT INTERACTION METAPHOR / WIDGET

Depends on the nature of the action, type of data

CONVENTIONS ARE GOOD

TOO MUCH ORIGINALITY IS BAD 😊

DEVELOP FOR THE USER, NOT FOR YOURSELF!

USABILITY FIRST, TECHNOLOGY SECOND
